

Every activity your kid does, in one place.

A personal catalog of every camp, class, lesson, and sport — past, present, and considering. With a text when it's time to sign up, pay, or show up.

Coordinating a kid's year is a part-time job nobody asked for.

Registration windows are unforgiving.

Camps and programs open on a Tuesday at 9am, sell out by 9:07am, and there's no calendar that knows about any of them.

Information lives in a hundred tabs.

PDFs, group texts, school newsletters, half-remembered conversations at pickup. Nothing aggregates.

Coordinating across kids and parents is manual.

Two kids, two schedules, two adults trying to keep them straight in a shared notes app or a spreadsheet that starts strong and dies in March.

WHAT IT IS

A planner for everything in a kid's life.

Camps, classes, after-school, weekends, school breaks. One place to hold what your kids are doing, what they're considering, and what's already locked in — week by week, kid by kid.

Summer-camp planning is the most-built example today. The model underneath is broader: every activity in the year your family is choosing, or not choosing, together.

Three things we believe.

01 **Structure beats chaos.**

Spreadsheets and group chats fall apart by mid-March. A real data model — kids, weeks, statuses — doesn't.

02 **Planning is a social act.**

Families don't plan alone. Co-parents, friends with shared schedules, agents acting on your behalf — all should be first-class.

03 **AI-forward, not AI-decorative.**

'Help me find,' agent-friendly write APIs, email parsing into structured updates. AI does the busywork; humans make the calls.

Every kid’s year on one grid.

Drag activities from the rail onto weeks. Statuses (considering, waitlisted, registered) are colored, time-of-day is set per activity, conflicts surface automatically, and overnight camps and vacation blocks live alongside class schedules.

A personal master library, plus an AI scout.

Onboarding asks for name, age, and the kinds of things each kid loves — nothing more — and lands you on an empty planner ready to fill.

A read-only link anyone can open.

One tap turns a planner into a public, anon-friendly URL: text it to a co-parent, a grandparent, or a babysitter. The recipient sees the same grid in view-only mode — no account required, revocable any time.

The roadmap, in plain English.

Collections

A staging layer between catalog and planner:
'Thinking about for Nico, Fall 2026.' Pinterest-board adjacent. Catalog → Collections → Planner.

Planning with friends

Linked planners across families — when kids share a camp, the activity lights up on each parent's grid.
Coordinate carpools, sign up together.

Predictive address everywhere

One shared autocomplete component for every address input — kid home, camp location, organization — instead of free-text.

Bring your agent

An MCP server and write API so a parent's AI agent can flip a status, set a registration date, or parse a confirmation email straight into the planner.

Calendar view

An alternative to the weekly grid for users who think in calendar layouts — visualizes single-day events, dropoff times, conflicts at a glance.

Rich link previews on share

When a planner link gets texted, the preview shows a branded card: 'Rachel shared {planner name} with you' instead of a bare URL that reads as spam.

Every activity, every kid, every week of the year.

Summer camps got us started. The product underneath is built for the rest of the year too — school-year classes, after-school, weekends, breaks — all in the same grid.
